The second largest oceanic capacities in the world

With the second largest oceanic capacities in the world (11 million square km), over four maritime fronts (English Channel, North Sea, Atlantic Ocean and Mediterranean sea), France gets a substantial asset concerning Renewable Marine Energies.

In 2020, the current projects will generate the ongoing installation of 50% on a total of 6GW in Normandy, Brittany and Loire River regions.

On a long run France will combine four different technologies; offshore wind, tidal flow, wave energy converter and floating turbines.

France will count on the extensive energy's experiences of worldwide known major groups to carry out those projects (EDF, GDF-SUEZ, AREVA, ALSTOM) combined with approved subcontractors.

The whole French Renewable Marine Energies know how is now fully identified and qualified through a complete database of more than 1400 companies.

This data are now available through a geolocation on CCI Business:
