## Contenu

- Description

RTE, the French electricity transmission system operator, is responsible for the development, implementation and operation of the connection of offshore wind farms to the French public power transmission system. In this context, RTE intends to carry out geophysical and geotechnical surveys for its future Offshore Substations and Submarine Cables. The purpose of this Contract notice is to introduce the 3 potential waves of call for tender covering some geophysical and geotechnical survey needs in the coming years and in particular from 2025 to 2026.
